

# Pit Stop Challenge

## Some Helpful Hints....

- Make sure the air compressor is on a secure, level surface
  - Set air compressor at 40-50 lbs.
  - Use a heavy duty (contractor's) extension cord
  - Use as short a length of extension cord as possible
  - Instruct players to **start lug nuts by hand** before using the air impact wrench\*

*\*otherwise, the game will be unusable due to cross threaded/stripped studs and you will still be charged for the rental.*
